

CORE COMPETENCIES

Ascenta Systems builds and runs business-critical web systems for small organizations and public agencies. One accountable engineer, documented delivery, no vendor lock-in.

- 1. Custom web application development:** portals, booking and checkout systems, integrations, internal tools (Google Cloud, Firebase).
- 2. Managed IT and infrastructure:** monitoring, patching on a published cadence, backups, DNS, email, cloud cost control.
- 3. Security and compliance:** Zero Trust access, encryption at rest and in transit, least-privilege accounts, audit trails, written security summaries.
- 4. Websites, hosting and email:** accessible public sites (WCAG 2.1 AA), hosting, domains, deliverability (SPF, DKIM, DMARC).
- 5. Modernization and takeover:** auditing, documenting and stabilizing systems built by a previous vendor.
- 6. Technical advisory:** architecture review, vendor evaluation and RFP technical requirements for non-technical owners.

PAST PERFORMANCE

Client and period	Scope	Result
Missouri Applied Physics March 2026 to present	Website built from scratch, business phone line, then hosting, patching and backups under a monthly managed-services agreement.	Live and monitored around the clock since launch.
The Soft Rebellion June 2026 to present	Website (React, Firebase) with booking on Cal.com and payment through Stripe in one flow, delivered for a launch event.	On time for the event; first paid bookings with no manual steps.
FittCoaching May 2026 to present	Google Workspace migration on the business domain with SPF, DKIM and DMARC; US mobile line for account recovery.	10/10 mail-tester; no deliverability issues.

References with contact details are provided on request, with each client's permission.

DIFFERENTIATORS

- ✓ **Fixed-price scopes from a published rate sheet.** No hourly surprises; change orders are written and approved before work starts.
- ✓ **The client owns everything.** Source code, cloud accounts, domains and documentation are held in the client's name from day one.
- ✓ **Documented, staged, tested.** Every system ships with an engineering reference a successor could work from; changes go through staging before production.
- ✓ **One accountable engineer.** The person who scopes the work builds it and runs it; a named point of contact.
